

ABSTRACT

A method of forming cosmetic articles, particularly cosmetic articles which include a surfactant such as a lathering or foaming surfactant or another cosmetic composition. In a preferred form of the method, a cosmetic composition and an adhesive are both deposited upon a substrate. The adhesive and/or the cosmetic composition can be provided in the form of a film or as a powder. Another substrate layer is then overlaid upon the first layer, and the substrates are pressed to bond the substrate layers together. The arrangement provides a uniform product in which the surfactant composition (or other cosmetic composition) is well entrapped between the substrate layers.
